Walkthrough

General Description - Game

The player starts the game in a city. There are 2 types of friendly npcs, the fast travel npc that allows the player to fast travel to other cities (there are only 2 cities in the vertical slice) for some gold, and the quest npc that gives the player a mission. The player needs to kill enemies to gain exp and gold. With the exp the player will be able to level up and with the gold the player will be able to do upgrades to his attack and defense. Other way to gain gold is to complete quests (in the vertical slice there will only be 1 quest), to do the quest the player must first talk with the quest npc.

The player has 2 types of attacks (basic attack and strong attack) and a block. The basic attack power, strong attack power and block power will increase when the player levels up or when the player does an upgrade. The player won't be able to move or attack while he is blocking.

There are 2 types of upgrades, attack upgrades that increase the basic attack power and the strong attack power, and defense upgrades that increase the block power of the player. To do the upgrades the player will need to be a certain level and spend gold. The player won't be able to access the upgrades menu while in battle.

The player will also have to spend gold if he wishes to fast travel to another city.

There are 3 types of enemies in the map (for the prototype) a melee enemy, a ranged enemy and an elite enemy, that has both melee and ranged attack.

General Description – App

In the app the player has a google map and markers in historical places. Once the player touches the markers the name of the place will appear and the player will gain 10 gold.
